

# Difference between Document and Window

Document		Window	
1	It represents a web page that is loaded in the Browser.	1	It represents a browser Window or Frame that displays the contents of the web page.
2	It is loaded inside the window.	2	It is the very 1st Object that is loaded in the Browser.
3	It is the Object of the window property.	3	It is the Object of the Browser.
4	All HTML tags and elements are part of the Document.	4	Functions and variables of JavaScript are members of the window object.
5	The Document is part of BOM(Browser Object Model) and DOM(Document Object Model).	5	The window is part of BOM, not DOM.
